Austin, Texas 78750

Dear Tony,

As a market-driven company, MicroTRAKgps realized that it needed a team of professionals and companies that share the same future potential for the Telematics industry. Not satisfied with prior so called "complete solutions", MicroTRAKgps personnel researched many approaches for hardware, networks and firmware. All this was tempered with many years of retail customer experience to form a logical and long awaited answer. We found RASTRAC, a proven, complete back office tracking solution, to be the solution that MicroTRAKgps's tracking backbone needed. RASTRAC offers MicroTRAKgps the software resources which enables us to provide cost effective, ultra accessible and flexible Telematics services. The RASTRAC ability to cater to our customer's specific fleet needs without cross brand/communications conflict is a testimony to their corporate experience and know-how. RASTRAC's intertwining of each technical segment to form an electronic blanket from computer or phone to vehicle has enabled MicroTRAKgps to be the first company to bring an aftermarket product and supporting service with its features and flexibility to the market."

Thanks again for the help and support.

Jerry Grisaffi  
President/CEO
